CONNECTING CALIFORNIA CONTRACTORS TO CONSTRUCTION BIDDING LEADS • EST. 1994

Cadiz Taps Two Builders for \$403M Southern California Water Pipeline

A major water infrastructure project is moving into the construction phase in San Bernardino County, where Cadiz Inc. has awarded contracts to two established heavy-civil firms to build out its Northern Pipeline. The roughly \$403 million effort will convert a 220-mile natural gas pipeline into a water conveyance system designed to deliver supplies to communities across Southern California. The work marks one of the more unusual large-scale water projects to reach the construction stage in the region, repurposing existing linear infrastructure rather than trenching an entirely new corridor.

W.M. Lyles Co. and Mike Bubalo Construction Co. have been selected as the builders on the project. Both bring deep experience in California water and underground work, and their selection signals that the pipeline conversion is transitioning from planning into active field execution. For contractors and suppliers watching Southern California's water sector, the award is a clear indicator that meaningful subcontracting and material-supply opportunities are now in play along a very long project alignment.

The driving force behind the project is the persistent search for new and reliable water supplies in the Southern California interior. San Bernardino County and surrounding communities face the same pressures confronting much of the state: constrained imported supplies, aging distribution systems, and growing demand. Converting a former natural gas line into a water conveyance route allows Cadiz to establish a long-haul delivery backbone while leveraging an existing 220-mile corridor, an approach that can reduce some of the permitting and right-of-way hurdles that typically slow greenfield pipeline construction.

In concrete construction terms, the scope centers on transforming a pipeline originally engineered to move

natural gas into one capable of safely and reliably carrying potable or raw water. That conversion is not a simple swap. It involves inspecting and rehabilitating the existing steel pipe, addressing internal linings and coatings suited to water rather than gas, and reworking or replacing valves, fittings, and appurtenances throughout the alignment. Pump stations, metering facilities, and control structures will typically be required to move water across such a long distance and to interconnect with receiving systems.

Because the pipeline stretches 220 miles, the work will almost certainly be executed in phases and across multiple geographic segments. Long linear projects of this type lend themselves to sequenced construction, with crews mobilizing along defined reaches to perform excavation at access points, tie-ins, and structure locations. Earthwork will be needed wherever the existing line must be exposed, repaired, or reconnected, and wherever new above-ground facilities such as pump stations and storage or metering sites are built. Site grading, foundations, and containment structures at those facilities represent discrete packages of work.

CONTINUED INSIDE →

Cadiz Taps Two Builders for \$403M Southern California Water Pipeline

CONTINUED FROM THE COVER

The conversion also carries a heavy mechanical and electrical component. Pumping water across a corridor of this length requires substantial horsepower, meaning pump and motor installation, piping manifolds, and associated electrical service and controls. SCADA and instrumentation systems to monitor flow, pressure, and water quality along the route are standard on modern conveyance projects. That combination of civil, mechanical, and electrical scope means the project will draw on a broad spectrum of trades rather than a single discipline.

For contractors, the range of work suggests opportunities well beyond the two prime builders. Pipeline rehabilitation and coating specialists, welders and pipe fitters, electrical and instrumentation contractors, pump and mechanical installers, and earthwork and grading crews all have a potential role. Concrete subcontractors will be needed for structure foundations and facility slabs, while suppliers of pipe fittings, valves, pumps, and control equipment stand to benefit from procurement on a project of this magnitude. Firms with experience in remote, long-corridor work in the California desert environment will be particularly well positioned.

The scale of the contracts, totaling approximately \$403 million, underscores the volume of labor and material the project will consume. Work spread over hundreds of miles and multiple facility sites typically translates into extended schedules and sustained crew demand, which can be attractive for subcontractors looking for backlog stability. It also means logistics, staging, and access planning will be significant considerations, given the length of the alignment and the likelihood that portions run through sparsely developed terrain.

With the prime contracts now awarded, the immediate opportunity for other firms lies in the subcontractor and supplier tiers. Contractors interested in participating should be reaching out to W.M. Lyles and Mike Bubalo Construction

to understand how the work will be packaged, which segments will be prioritized, and what specialty scopes the primes intend to subcontract. Establishing relationships early, before segment-by-segment buyout accelerates, is often the difference between winning packages and missing them on projects of this length.

Firms positioning for a role should prepare to demonstrate relevant experience in water conveyance, pipeline rehabilitation, and desert or remote-corridor construction. Documenting qualifications for pump station and electrical work, coating and lining scopes, and long-haul pipe handling will help subcontractors stand out. Given the water-utility nature of the end use, contractors should also anticipate the quality, testing, and disinfection requirements that accompany potable water systems, and be ready to staff accordingly.

More broadly, the Cadiz Northern Pipeline reflects a continuing appetite in California for creative water-supply solutions and the construction dollars that follow. As the state wrestles with drought cycles and supply reliability, projects that add new conveyance and delivery capacity are likely to keep generating work for heavy-civil, mechanical, and electrical contractors. The repurposing model at the heart of this project may also draw attention from other agencies weighing whether existing linear infrastructure can be adapted for water use.

For Southern California builders, the message is straightforward: a large, multi-phase water project with hundreds of millions of dollars in construction value is now under way in San Bernardino County. Contractors and suppliers with the right qualifications should be tracking the project's phasing and buyout closely, engaging the two prime builders, and lining up the crews, equipment, and material commitments needed to compete for the packages that will roll out along the 220-mile route.

Cross-Border Sewage Crisis Signals Work at Imperial Beach

A persistent sewage pollution problem in Imperial Beach is disrupting local recreation, forcing a surf camp to bus children to cleaner beaches and prompting junior lifeguard programs to relocate up the coast, according to CalMatters.

The contamination stems from cross-border flows that have long fouled the waters near the San Diego County community, an issue that has drawn attention to the aging and overwhelmed wastewater infrastructure serving the region.

For contractors, the ongoing crisis underscores the scale of treatment and conveyance improvements needed along the southern coastline. Federal and state efforts to address transboundary sewage have historically involved upgrades to treatment plants and collection systems near the border.

Court Upholds SoCal Gas Appliance Limits Affecting Four Counties

A federal appeals court has cleared the way for Southern California air regulators to enforce new restrictions on the sale of certain gas-powered appliances, including commercial and industrial water heaters. The 9th Circuit Court of Appeals issued a 2-1 ruling last week upholding the limits.

The rules apply across four Los Angeles-area counties and had drawn opposition from businesses and developers who challenged the restrictions in court. With the ruling standing, the limits on gas commercial and industrial appliances can now move forward.

Firms working in water and wastewater construction should watch for public funding tied to remediation of the Tijuana River watershed and related facilities, which could translate into future public-works opportunities in San Diego County.

For contractors, the decision signals a continued push toward electrification in the region's commercial and industrial building sector. Mechanical and plumbing firms bidding new construction and retrofit work in the affected counties should anticipate specifications shifting away from gas appliances toward electric alternatives.

Developers and general contractors planning projects in the Los Angeles area may need to adjust equipment selections and coordinate with subcontractors on compliant systems, potentially affecting cost estimates and scheduling on upcoming work.

San Diego Braces For El Niño Storm Infrastructure Work

San Diego is preparing for a forecasted "super El Niño" winter that could bring severe flooding and coastal storm damage, putting a spotlight on the region's aging stormwater systems and century-old dams.

The condition of the city's outdated drainage networks and old dam infrastructure raises the prospect of upgrade and repair work as officials move to reduce flood risk ahead of extreme weather.

For contractors, aging stormwater and dam assets typically translate into demand for civil and water-infrastructure projects, from drainage improvements to structural rehabilitation of dams.

Firms working in San Diego County should watch for accelerated public-works spending tied to storm preparedness and emergency repairs as the El Niño season develops.

Tutor Perini Hit With \$42.4M More in Philadelphia Hotel Dispute

Los Angeles-based Tutor Perini faces an additional \$42.4 million judgment tied to a contract dispute over its troubled construction of the W and Element hotels in Philadelphia, according to a recent court order.

The latest ruling adds to a \$174.6 million judgment issued in April, when the company was found liable for breach of contract on the project. The combined liability now tops \$217 million.

While the dispute centers on an out-of-state project, Tutor Perini is one of California's largest general contractors and a major player in public works across the state, from transit to highways. Litigation of this scale can weigh on a firm's bonding capacity and balance sheet, factors that owners and sureties weigh when awarding large California contracts.

Contractors and subcontractors that team with or compete against Tutor Perini on California public jobs should track how the ongoing legal exposure affects the company's financial standing on future bids.

Altadena Rebuild Bill Could Alter Housing Density Rules

A proposed measure at the Legislature would exempt fire-ravaged Altadena from two of California's density-boosting housing laws, aiming to give the community more control over how it rebuilds after devastating wildfires.

The bill, tied to state Senator legislation referenced as SB 1090 and touching on SB 9, would let the unincorporated Los Angeles County town rebuild on its own terms rather

than under statewide density mandates. Supporters frame it as protecting neighborhood character during recovery.

Critics warn the exemption could unintentionally slow or block rebuilding for many homeowners by limiting options that the density laws otherwise allow. That tension has become a flashpoint as Altadena works toward reconstruction.

For contractors, the outcome will shape the scale and type of residential work coming out of the fire recovery in the Altadena area. Whether projects proceed as single lots or allow added units per parcel will influence bidding opportunities, permitting timelines, and the volume of rebuild work across Los Angeles County.

C&S PUBLISHING (916) 729-5432 CandSPublishing@gmail.com

**INVITATION TO BID****Frick Unit – Phase 3 Laterals**

Owner: Arvin- Edison Water Storage District

Bid Date: August 18th, 2026 @ 10:00 A.M.

Project Duration: 250 cd's

We are requesting quotes from all qualified (DBE) Subcontractors and Suppliers but not limited to: AGGREGATES, ASPHALT, CONCRETE MATERIAL, LOW DENSITY CELLULAR GROUT, PIPE SUPPLIERS, ASPHALT GRINDING/PAVING/STAMPED, CONCRETE STRUCTURES, EROSION CONTROL, PVC & PLASTIC PIPE, REINFORCING STEEL, SAWCUTTING, STRIPING, SURVEYING, SWPPP, TRAFFIC CONTROL, WELDED STEEL CASING PIPE, TRUCKING, PAINTING/COATINGS, VALVES/WATER MAIN/ TEMP FACILITIES.

Project Description: In general, the Work will construct approximately 4.5 miles of irrigation pipelines ranging in size from 18-inch down to 6-inch pipe including bends, air vents, isolation valves, open cut Kern County Road encased crossings, and multiple grower turnouts with flowmeters.

Project information, including plans & specifications can be found by contacting:
estimating@mountaincascade.com

Subcontractors must possess a current contractor's license, DIR number, insurance and worker's compensation coverage. Subcontractors will be required to enter into our standard contract.

Mountain Cascade, Inc. is a Union Contractors and is signatory to Operating Engineers/Carpenters/Laborers/Teamsters.

Please feel free to contact Mountain Cascade, Inc. at 925.373.8370 with any questions concerning bonding, insurance, lines of credit, and job overview. We look forward to your response.

Mountain Cascade, Inc

555 Exchange Court, Livermore, CA 94550

We request bids from all qualified subcontractors and suppliers including DVBE/DBE/SDVOSB/SBE/MBE/VOSB/WBE's for the following Project:

Windsor SECONDARY TREATMENT SYSTEM UPGRADES PROJECT

Bid Date: September 3, 2026 until 2:00PM

Contact: Larry Etcheverry, larrye@overaa.com

Anna Stein, annas@overaa.com

Danny Holdren, dannyh@overaa.com

Scope of work includes: The work consists of dewatering the Water Reclamation Facility's aeration basin, further excavation and installation of a new concrete aeration basin facility with a flow splitting structure, air lines, diffusers, a mixing system, a surface wasting pumping system, and a high flow return pump connected to the adjacent high flow storage pond. In conjunction with the new aeration basin, a new blower building with internal blowers will be constructed with a separate electrical control building. Additional work includes a separate carbon feed building with internal tanks and chemical metering pumps, a below grade secondary clarifier weir flow splitting structure, and relocation of a concrete sand filter high flow diversion structure.

Duration: 482 working days with Intermediate Milestones

Disadvantaged Business Enterprise: DBE/DVBE/MBE/WBE/SBE participation is encouraged. Funding for this project may be provided in full or part through an agreement with the United States Environmental Protection Agency (EPA) Water Infrastructure Finance Innovation Act (WIFIA) program. Special attention should be directed to Section 9 of the Special Provisions, which outlines requirements for Contractors and Subcontractors based on this funding source.

Pre Bid Conference: January 14, 2026 at 10:00AM and a second bid walk date of January 28, 2026 at 10:00 A.M. at 8400 Windsor Road, Windsor, CA 95492-0100. Attendance at either mandatory bid walk will satisfy this requirement of qualified bidders.

Location: 8400 Windsor Road, Windsor, CA 95492

Documents are available at no cost on www.buildingconnected.com, login is required.

Electronic copies of the Contract Documents, including Proposal Forms, Plans, and Specifications will be available at no charge at the Town of Windsor website (<https://www.townofwindsor.com/bids.aspx>). Bidders will need to fill out a short informational form in order to gain access to the bid documents.

We encourage bids from all Subcontractors/Suppliers including DVBE/SDVOSB/VOSB/MBE/WBE/DBE/SBE bidders. We are an equal opportunity employer.

We encourage contracting with a group of DBEs when a contract is too large for one firm to handle individually. We offer to assist you with bonding, credit, and insurance. Acceptance of Subcontractor's bid is expressly conditioned upon Subcontractor's assent to all terms and conditions contained in the applicable Overaa standard agreement without modification. These agreements are available for viewing in the Bidding Opportunities tab on our website, <https://www.overaa.com/subcontractors/bidding-opportunities>. By submitting a bid, Subcontractor is certifying that it has read the applicable Overaa standard agreement (either the Subcontract Agreement or Purchase Order Agreement) in full and accepts all terms without modification. Further, by submitting a bid, Subcontractor waives any rights or claims it may have to modify the terms of the Overaa standard agreement, whether through negotiations, discussions, or other means.

Overaa's standard agreements include the right for Overaa to require Subcontractors to furnish a faithful performance and labor bond, in a form and from a surety acceptable to Overaa, in the amount of 100% of the Subcontract price. Subcontractors will be required to comply with all subcontract insurance requirements, which includes providing a waiver of subrogation endorsement to their workers compensation insurance. Overaa utilizes the environmentally-friendly Textura electronic invoicing and payment system to streamline and expedite subcontractor invoicing and payment. Service fees charged by Textura for processing of electronic payments to Subcontractor shall be the responsibility of Subcontractor. Please contact our office if you would like more information. We are signatory to both Carpenters and the Laborers Union Collective Bargaining Agreements.
